

## Experts in Specialist Surface Treatments

We provide both ferrous and non-ferrous conversion coating services (Titanium Zirconium & Zinc Phosphate), creating a superior corrosion resistant barrier layer and excellent adhesion properties for wet paint and powder coating applications.

We operate our conversion coating services from our new surface treatments facility in Burnley, utilising the latest technologies for full automation and a state-of-the-art data management system.

Our in-house jiggging solutions, maximise the capacity and quality of our applied treatments, while our 3D modelling and CAD capabilities allow us to design tooling solutions without needing the physical component.

Our expertise enables us to deliver bespoke conversion coating solutions for individual customers across multiple sectors including Automotive, Motorsport, Heavy Goods, Power Transmission and Aerospace, adding quality and value to every product.

## Improves Corrosion Resistance & Paint Adhesion

We work closely with all our customers to reduce cycle times and costs.

Capabilities:

- Fully automated process with a 1 tonne payload
- Handles geometries up to 1.5m x 3.5m x 0.6m
- In-house specialist jiggging solutions from simple to complex
- We can offer Tier 1 Service solutions for major OEMs
- BCW has the capability to respond to prototype, low-medium-high volume production
- Holds ISO9001
- Offers 7 days a week operation & support

Extensive in-house and external testing is conducted with customers to ensure specifications are met. We also develop new treatment specifications for new projects and customer requirements.
